EXAM Microsoft GH-300, GitHub Copilot

Shared by [u/Witty-Router-4732](#) on aiexamcerts

10 practice questions for the Microsoft GH-300 exam, GitHub Copilot, each followed by its answer and a short explanation. More free sets and the full practice exam: www.aiexamcerts.com/microsoft/gh-300. Spotted a mistake? Email support@aiexamcerts.com with the exam code GH-300 and the question number.

1. Which Copilot feature drafts a summary of changes for a pull request description?

- A Copilot-generated security alert that closes the pull request automatically
- B Copilot-generated release tag that publishes the package to npm
- C Copilot-generated pull request summary
- D Copilot-generated billing report that lists seat charges by team

Answer: C

Copilot can generate a pull request summary that describes the changes, which the author can edit before submitting. Security alerts, release tags, and billing reports are different features that do not draft pull request descriptions. The question checks github.com pull request tooling.

2. A file that stores repository-wide instructions for Copilot is named `copilot-_____`.md and lives in the `.github` folder.

Answer: instructions

The `copilot-instructions.md` file in the `.github` folder holds repository-wide guidance that Copilot applies to its responses. The blank accepts instructions because that is the filename stem. This file is the standard way to share conventions with the whole team.

3. A pull request author wants a concise description of the changes before requesting review. Which Copilot feature helps?

- A The Copilot pull request description generator on github.com
- B A GitHub Sponsors button that lists the author's supporters
- C A Pages build log that shows the static site compilation steps
- D A discussions poll that asks the community which color to use

Answer: A

The pull request description generator drafts a summary from the changes, which the author then edits. Sponsors buttons, Pages build logs, and discussion polls are unrelated. The question checks github.com pull request assistance.

4. GitHub Copilot is available to individual developers through a personal plan rather than only through an organization.

- A True
- B False

Answer: A (True)

Individual plans such as Pro and Pro+ let a developer subscribe directly without an organization. This is why individuals and teams have different purchasing paths. The statement is true because personal plans exist alongside organization plans.

5. Which two statements about Copilot plans are accurate? (Choose two.)

- A Copilot Business includes organization-level policy controls for its seats
- B Copilot Free includes a limited monthly allowance for chat and completions
- C Copilot Pro is only available to organizations with more than 500 members
- D Copilot Enterprise cannot be used with github.com repositories
- E Copilot Business requires each developer to buy a separate GitHub Enterprise Cloud account

Answer: A, B

Business includes organization policy controls and Free includes limited monthly usage. The other options misstate who can buy Pro, how Enterprise works with github.com, and the account requirement for Business. Plan differences are a frequent exam topic.

6. Which Copilot customization lets a team reuse a specialized persona with its own tools and instructions in VS Code?

- A A custom agent defined in an agent profile file
- B A GitHub Sponsors tier that unlocks premium badges
- C A repository topic that tags the project for search
- D A release asset that contains compiled binaries

Answer: A

Custom agents define a persona with its own instructions and tools, which teams can reuse. Sponsors tiers, repository topics, and release assets are unrelated to Copilot customization. The question checks extensibility concepts.

7. Which setting in the IDE lets a developer see Copilot's inline suggestion list when several options exist?
- A The shortcut that accepts the whole suggestion with the Tab key
 - B The setting that disables Copilot for the current language
 - C The setting that chooses which model Copilot Chat uses
 - D The panel or shortcut that opens the list of alternative suggestions

Answer: D

The suggestions panel or shortcut opens a list of alternative completions so the developer can compare them. File encoding, window titles, and spell checking do not affect suggestion lists. The question checks the inline workflow beyond the first suggestion.

8. Copilot usage _____ show administrators how many seats are active and how they use Copilot features across an organization.

Answer: metrics (also accepted: dashboards, reports)

Copilot metrics and usage dashboards show seat activity and feature use, which helps administrators plan and measure adoption. The blank accepts metrics, dashboards, or reports because each names the same visibility tool. These views support data-driven rollout decisions.

9. Which setting lets a team restrict which MCP servers developers can use in an organization?
- A The organization's logo upload field in the profile page
 - B The repository's default merge method for all pull requests
 - C Organization policy for MCP servers in the Copilot settings
 - D The organization's default time zone for billing reports

Answer: C

Organization policies for MCP servers control which external tool servers members can connect. Logos, merge methods, and time zones do not govern tool access. The question checks governance of extensibility.

10. An administrator wants to block Copilot suggestions that match public code for all members. Which setting is the correct place to configure this?
- A The organization's billing contact email address field
 - B The repository's default branch name setting for new clones
 - C The member's profile privacy setting on github.com
 - D The organization's Copilot policy for suggestions matching public code

Answer: D

The organization policy for public code matching controls whether suggestions that match public code are blocked. Billing contacts, default branch names, and profile privacy do not control suggestion matching. The question checks administrative policy knowledge.
